DAO LE TRONG

FULL STACK SOFTWARE ENGINEER

letrongdaocontact8@gmail.com +84 582 124 303 Linkedin GitHub daoletrong.com

PROFESSIONAL SUMMARY

Full-stack software engineer with **1+ year** shipping production web apps at a securities firm: a shareholder voting platform that ran without incident at a live General Meeting, digital KYC onboarding, and an internal MIS used by **~200 staff**. Outside work, I designed, built and ran HNB Hub, a full-stack Next.js community app for **10+ active members,** covering the data model, backend, frontend and cloud deployment. I work best under real deadlines, put solid foundations before surface polish, and ship early, then improve through iteration. More at daoletrong.com.

WORK EXPERIENCE

Software Engineer

May 2025 – July 2026

OCBS Securities Joint Stock Company

Shareholder Meeting Portal

React · Vite · REST API integration

- **Owned the front end from redesign to release, rebuilding it solo** to replace an outdated legacy interface with a modern React app covering shareholder check-in, voting-eligibility checks, ballot counting and live results.
- **Integrated the full front end with the backend APIs**, keeping check-in status, eligibility and vote tallies in sync on screen throughout the meeting.
- **Ran without incident on its first live use**, serving a General Meeting of **60+ shareholders**.

eKYC Digital Onboarding: taikhoan.ocbs.com.vn

React · Vite → HTML · CSS · JavaScript

- **Contributed across every module** of the original React KYC platform (identity forms, face verification, NFC ID-card reading and e-contract), building features and changes for the full online account-opening flow alongside the team lead, who owned the project.
- **Rebuilt the page solo as a static site** in plain HTML, CSS and JavaScript, choosing no framework so the page loads faster and is cheaper and easier to host.
- **Added device detection** to send each visitor straight to the right app store (iOS / Android), and made the layout **fully responsive and mobile-first**, since most traffic comes from phones.

Internal MIS & Departmental Admin Systems

React · Vite · Ant Design · REST API integration

- **Co-led the front end of the company's Management Information System** (MIS) as one of two front-end developers. The system is used by **~200 staff** across Project Management, Accounting, Risk Management, HR….
- **Built a library of reusable React components** shared across the MIS modules, keeping the UI consistent and making new screens faster to build.
- **Maintained the system in production**: fixed defects and delivered change requests from business users and external requirements to deadlines set by leads, without interrupting daily operations.
- Built **ASP.NET API and SQL Server stored procedures** for the Risk Management module, letting the team track each customer's risk level and assigned program in one place.

Frontend Developer Intern

Sep 2023 - Dec 2023 & Mar 2025 - Apr 2025

Ky Nguyen So JSC & Sunshine Software Company

- Built reusable React components with TypeScript and Ant Design, reducing duplicated UI code across pages.
- Integrated front-end screens with REST APIs, handling loading, error and empty states for a smoother user experience.
- Fixed cross-browser and mobile layout bugs, making key pages fully responsive on small screens.
- Participated in code reviews and daily stand-ups, adopting team conventions for Git workflow and component structure.

PROJECTS

HNB Hub

GitHub

Solo full-stack project • Oct 2025 – Jul 2026

- **Solely designed, built and run** a live community app for **10+ active members** — data model, frontend and backend using Next.js.
- Newsfeed, group chat, folder-based photo & video library, seasonal group minigames and daily check-in with streaks.
- Media stored on **Backblaze / AWS S3**; deployed on **Vercel with Cloudflare**.

ComZone: Comic Marketplace (Buy · Auction · Exchange)

GitHub

Graduation thesis · Team of 4 · Sep 2024 – Jan 2025

- **Led system architecture and database design** for a comic marketplace with three core modules (buying, auctions and peer-to-peer exchange), and **built most of the NestJS backend APIs**.
- **Designed and built the peer-to-peer exchange module on my own**, refined with the supervising lecturer. Users post swap requests, negotiate in chat, and agree on compensation, shipping and schedule. Escrow holds both parties' payments until each side confirms receipt, then pays out to in-app wallets.
- Built dispute handling and refunds for mismatched items, plus **VNPay, ZaloPay payments** and **Giao Hang Nhanh** shipping integration. Deployed the full stack on **Vercel, Render and AWS RDS**.

TECHNICAL SKILLS & LANGUAGES

Languages	TypeScript, JavaScript
Frontend	React, Next.js, Redux Toolkit, Zustand, React Query, Tailwind CSS, Framer Motion
Backend	Node.js, Express.js, NestJS
Databases	MySQL, PostgreSQL, Microsoft SQL Server, Supabase
Cloud & DevOps	Vercel, Render, Cloudflare, AWS RDS
Tools	Git, Postman, Figma, Claude Code
AI Workflow	Claude Code (spec-first prompting, project context files, human-reviewed changes)

EDUCATION

Master of Information Technology

University of Information Technology, VNU-HCM
2026 - 2028 (expected)

Bachelor of Software Engineering

FPT University, Ho Chi Minh City
2022 - 2025 • GPA: 3.14 / 4.0

LANGUAGES

- **Vietnamese:** Native
- **English:** Professional working proficiency
- **Japanese:** Basic (6 months of university study)
